How to configure a Windows XP Device to Open DNS

Open DNS

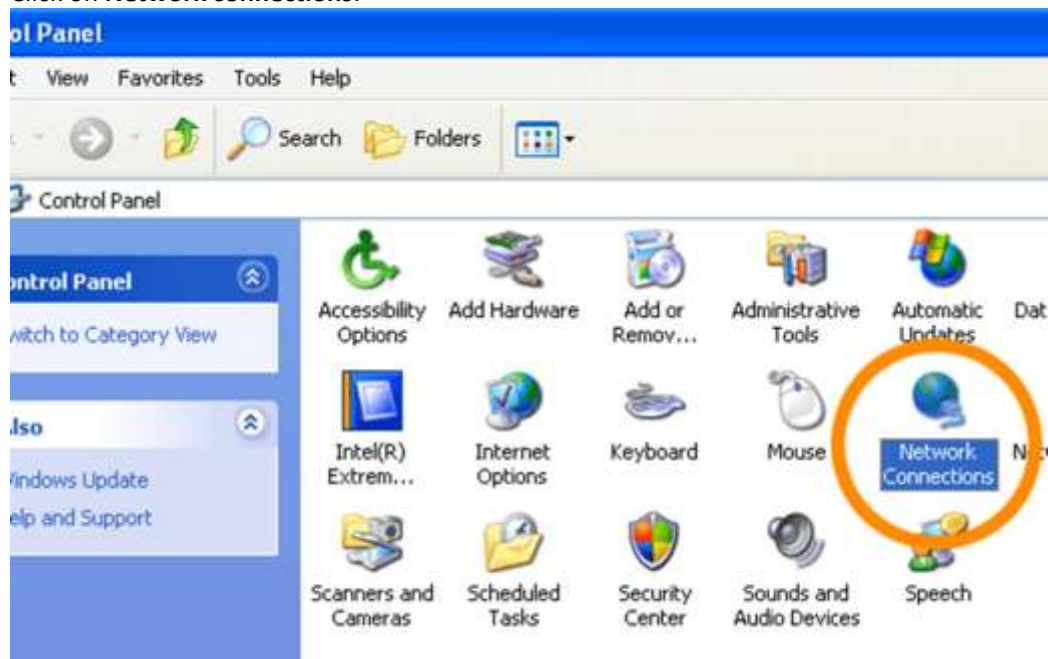

Open DNS provides a cloud-delivered network security services, delivering automated protection against advanced attacks for any device, no matter where it is. Family shield is pre-configured to block adult content, you can set it up and forget about it.

How to Configure

1. Go to **start menu**.
2. Select **control panel**.

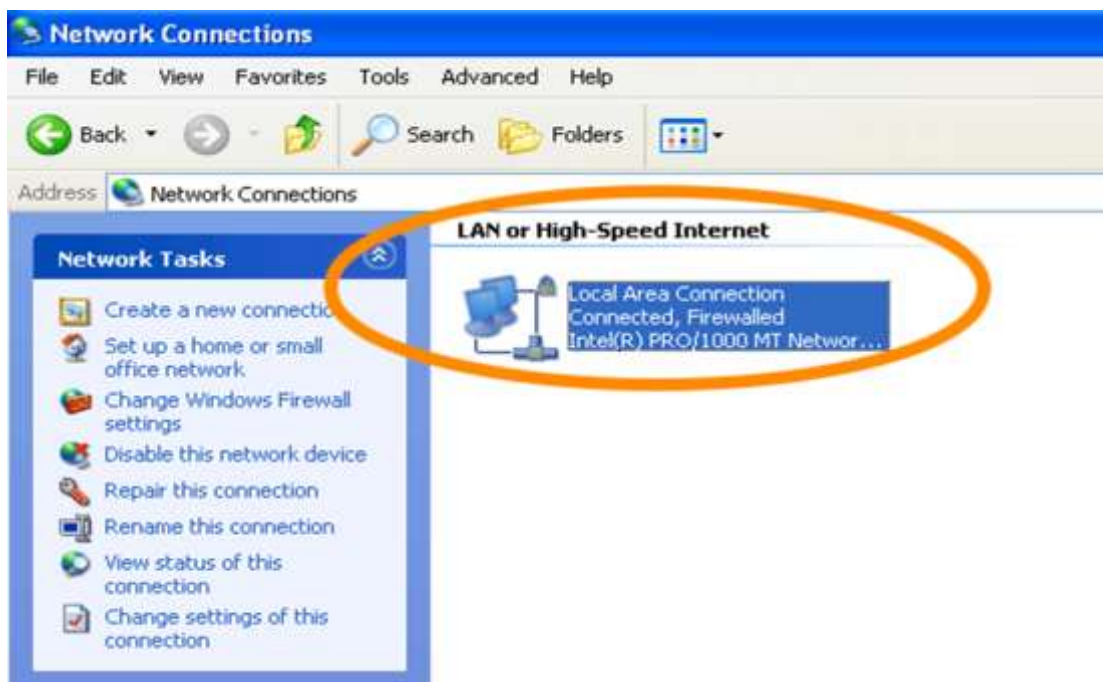

3. Click on **Network connections**.

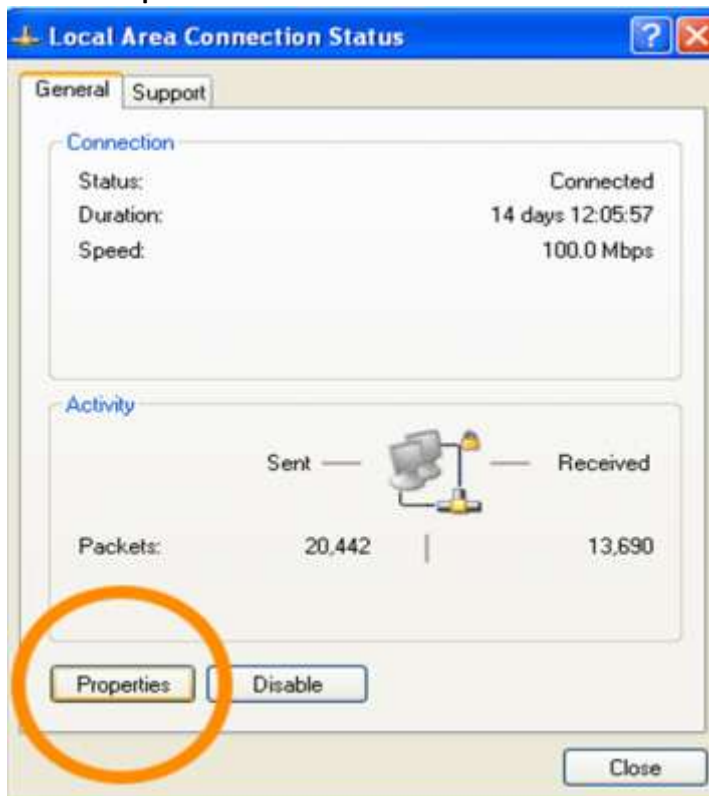

4. Find the network connection you are using in Active Networks.

5. **Double click** to select your connection.

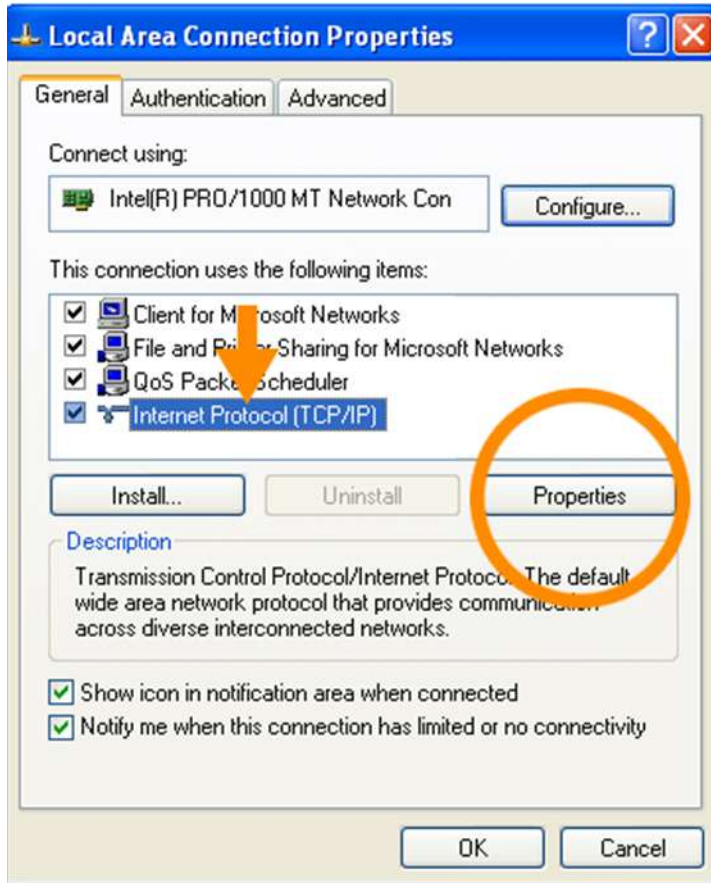

6. Click on **Properties**.

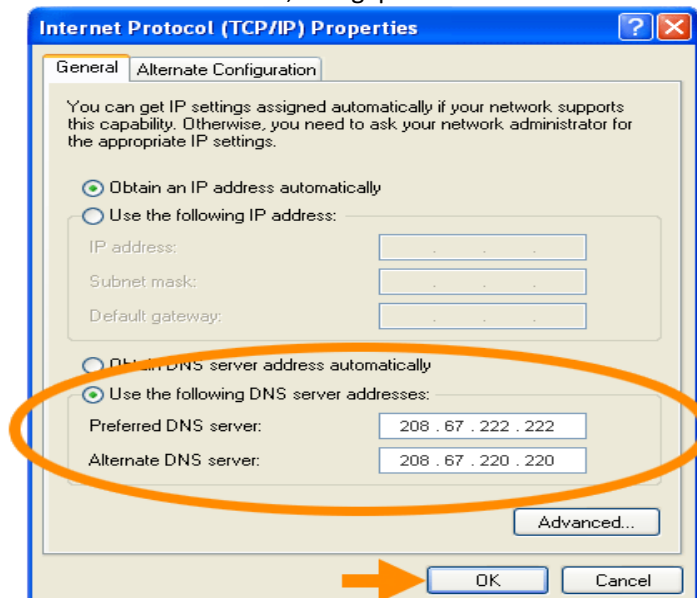

7. Click on **Internal Protocol Version 4 (TCP/IPv4)**.

- Click on **Properties**.

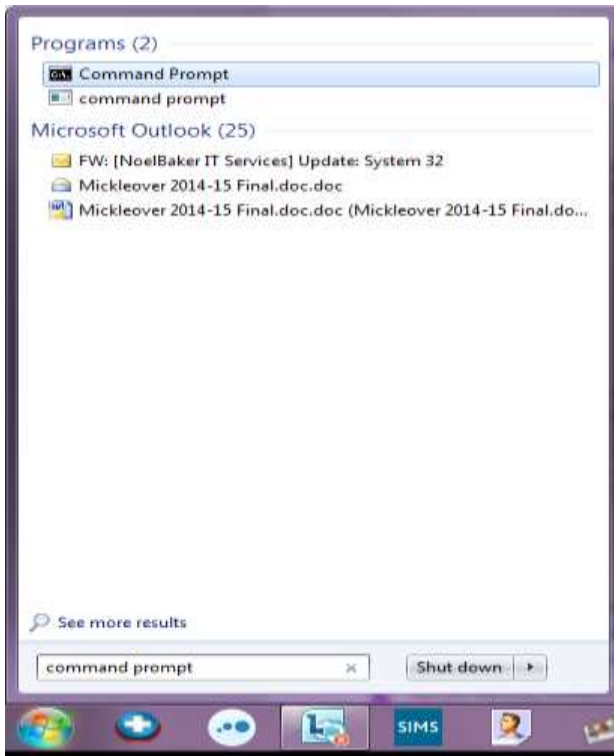

- Choose **Use the following DNS Server Addresses**.
- Input Open DNS Server addresses, into gaps.

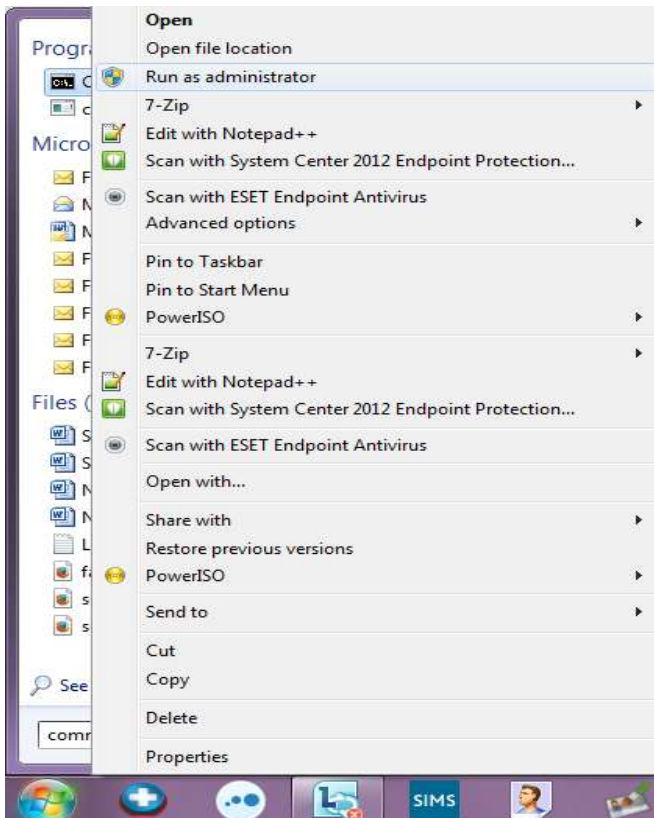

- Click **Ok** and close each of the windows.
- Flush DNS and Browser Cache.
- Go to **start menu**.

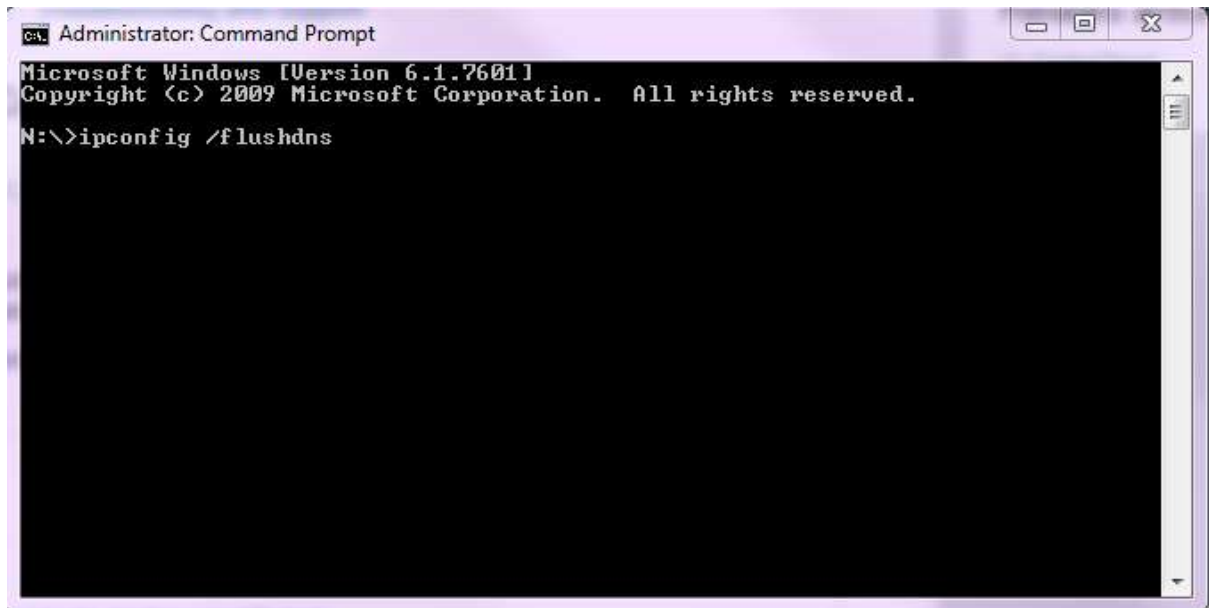

14. Search **command prompt**.

15. Right click and choose **run as administrator**.

16. In new window type: **ipconfig /flushdns**

A screenshot of a Windows Command Prompt window titled "Administrator: Command Prompt". The window shows the following text: "Microsoft Windows [Version 6.1.7601] Copyright (c) 2009 Microsoft Corporation. All rights reserved. N:\>ipconfig /flushdns". The command prompt is currently empty, indicating the command has been executed successfully.

```
Administrator: Command Prompt
Microsoft Windows [Version 6.1.7601]
Copyright (c) 2009 Microsoft Corporation. All rights reserved.
N:\>ipconfig /flushdns
```
