

Power Maths White Rose Edition calculation policy

Sycamore Academy

***Power Maths White Rose Edition* calculation policy, UPPER KS2**

KEY STAGE 2

In upper Key Stage 2, children build on secure foundations in calculation, and develop fluency, accuracy and flexibility in their approach to the four operations. They work with whole numbers and adapt their skills to work with decimals, and they continue to develop their ability to select appropriate, accurate and efficient operations.

Key language: decimal, column methods, exchange, partition, mental method, ten thousand, hundred thousand, million, factor, multiple, prime number, square number, cube number

Addition and subtraction: Children build on their column methods to add and subtract numbers with up to seven digits, and they adapt the methods to calculate efficiently and effectively with decimals, ensuring understanding of place value at every stage.

Children compare and contrast methods, and they select mental methods or jottings where appropriate and where these are more likely to be efficient or accurate when compared with formal column methods.

Bar models are used to represent the calculations required to solve problems and may indicate where efficient methods can be chosen.

Multiplication and division: Building on their understanding, children develop methods to multiply up to 4-digit numbers by single-digit and 2-digit numbers.

Children develop column methods with an understanding of place value, and they continue to use the key skill of unitising to multiply and divide by 10, 100 and 1,000.

Written division methods are introduced and adapted for division by single-digit and 2-digit numbers and are understood alongside the area model and place value. In Year 6, children develop a secure understanding of how division is related to fractions.

Multiplication and division of decimals are also introduced and refined in Year 6.

Fractions: Children find fractions of amounts, multiply a fraction by a whole number and by another fraction, divide a fraction by a whole number, and add and subtract fractions with different denominators. Children become more confident working with improper fractions and mixed numbers and can calculate with them.

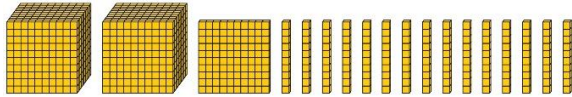

Understanding of decimals with up to 3 decimal places is built through place value and as fractions, and children calculate with decimals in the context of measure as well as in pure arithmetic.

Children develop an understanding of percentages in relation to hundredths, and they understand how to work with common percentages: 50%, 25%, 10% and 1%.

Year 5

	Concrete	Pictorial	Abstract
Year 5 Addition			
Column addition with whole numbers	<p>Use place value equipment to represent additions.</p> <p>Add a row of counters onto the place value grid to show $15,735 + 4,012$</p>	<p>Represent additions, using place value equipment on a place value grid alongside written methods.</p> <p>I need to exchange 10 tens for a 100.</p>	<p>Use column addition, including exchanges.</p>
Representing additions		<p>Bar models represent addition of two or more numbers in the context of problem solving.</p>	<p>Use approximation to check whether answers are reasonable.</p> <p>I will use $23,000 + 8,000$ to check.</p>

Checking strategies and representing subtractions

Bar models represent subtractions in problem contexts, including 'find the difference'.

Children can explain the mistake made when the columns have not been ordered correctly.

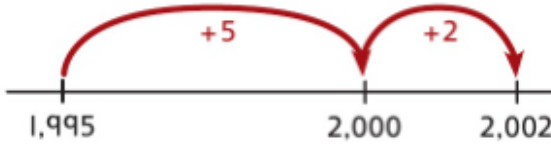

Use approximation to check calculations.

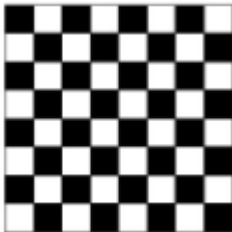

Bella's working

<p>Dividing up to four digits by a single digit using short division</p>	<p>Explore grouping using place value equipment.</p> $268 \div 2 = ?$ <i>There is 1 group of 2 hundreds.</i> <i>There are 3 groups of 2 tens.</i> <i>There are 4 groups of 2 ones.</i> $264 \div 2 = 134$	<p>Use place value equipment on a place value grid alongside short division. The model uses grouping. A sharing model can also be used, although the model would need adapting.</p> <p>Lay out the problem as a short division.</p>	<p>Use short division for up to 4-digit numbers divided by a single digit.</p> $\begin{array}{r} 0556 \\ 7 \overline{) 3892} \end{array}$ $3,892 \div 7 = 556$ <p>Use multiplication to check.</p> $556 \times 7 = ?$ $6 \times 7 = 42$ $50 \times 7 = 350$ $500 \times 7 = 3500$ $3,500 + 350 + 42 = 3,892$

There is 1 group of 4 in 4 tens.
There are 2 groups of 4 in 8 ones.

Work with divisions that require exchange.

4 $\overline{) 92}$

First, lay out the problem.

4 $\overline{) 9} \downarrow 2$

How many groups of 4 go into 9 tens?
2 groups of 4 tens with 1 ten left over.

Exchange the 1 ten left over for 10 ones.
We now have 12 ones.

4 $\overline{) 9} \downarrow 12$

How many groups of 4 go into 12 ones?
3 groups of 4 ones.

Understanding remainders

Understand remainders using concrete versions of a problem.

80 cakes divided into trays of 6.

80 cakes in total. They make 13 groups of 6, with 2 remaining.

Use short division and understand remainders as the last remaining 1s.

6 $\overline{) 80}$

Lay out the problem as short division.

6 $\overline{) 8} \downarrow 0$

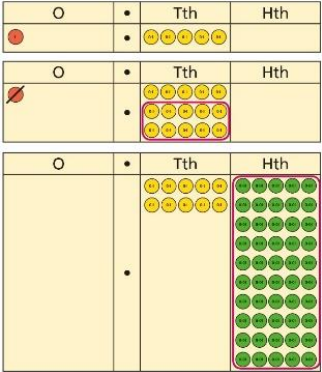

How many groups of 6 go into 8 tens?
There is 1 group of 6 tens.
There are 2 tens remaining.

6 $\overline{) 8} \downarrow 20$

How many groups of 6 go into 20 ones?
There are 3 groups of 6 ones.
There are 2 ones remaining.

In problem solving contexts, represent divisions including remainders with a bar model.

$683 = 136 \times 5 + 3$
 $683 \div 5 = 136 \text{ r } 3$

<p>Dividing decimals by 10, 100 and 1,000</p>	<p>Understand division by 10 using exchange.</p> <p><i>2 ones are 20 tenths.</i></p> <p><i>20 tenths divided by 10 is 2 tenths.</i></p>	<p>Represent division using exchange on a place value grid.</p>  <p><i>1.5 is 1 one and 5 tenths.</i> <i>This is equivalent to 10 tenths and 50 hundredths.</i> <i>10 tenths divided by 10 is 1 tenth.</i> <i>50 hundredths divided by 10 is 5 hundredths.</i> <i>1.5 divided by 10 is 1 tenth and 5 hundredths.</i> $1.5 \div 10 = 0.15$</p>	<p>Understand the movement of digits on a place value grid.</p>  <p>$0.85 \div 10 = 0.085$</p> <p>$8.5 \div 100 = 0.085$</p>
<p>Understanding the relationship between fractions and division</p>	<p>Use sharing to explore the link between fractions and division.</p> <p><i>1 whole shared between 3 people.</i> <i>Each person receives one-third.</i></p>	<p>Use a bar model and other fraction representations to show the link between fractions and division.</p>	<p>Use the link between division and fractions to calculate divisions.</p> $5 \div 4 = \frac{5}{4} = 1\frac{1}{4}$ $11 \div 4 = \frac{11}{4} = 2\frac{3}{4}$

	$1 \div 3 = \frac{1}{3}$
